## Interpon D STF

# The natural performer

The **Interpon D** range of powder coatings provides the architectural industry with market-leading products, designed to support a sustainable and stylish built environment. Backed by half a century's experience and driven by a constant desire to innovate, Interpon is providing the tools to enable architects, fabricators and system houses to bring their creations to life and build a lasting legacy to inspire future generations.

**Interpon D STF** powder coatings are the latest example of this innovation and out-of-the-box thinking. Using sublimation film technology, the range gives aluminum the look and feel of wood, delivering the performance needed, while also being light, durable, easy to handle, and backed by an Environmental Product Declaration (EPD).

## Leading benefits

The **Interpon D STF** range is enabling architects, fabricators and fenestration specialists to realize the design benefits of wood, as well as the flexibility, maintenance and sustainability benefits of aluminum.

### Putting sustainability first

The range uses sublimation technology to bring you the benefits of nature, without depleting any of the planet's most precious natural resources. It also uses no Volatile Organic Compounds (VOCs) and comes with the backing of an Environmental Product Declaration (EPD), so you can be sure that your creations are built for the future.

### Hassle-free performance

Unlike wood, which often requires regular maintenance, powder coated aluminum provides a highly durable finish that is resistant to corrosion and weathering. This not only provides greater consistency in performance, but also helps reduce maintenance costs over the medium and long term.

### Design optimization

Interpon D STF provides excellent edge coverage on both conventional and multi-faceted pieces. So no matter how complex the shape of design, you can ensure consistency across the various parts for an optimal finish.

## Deciding features

Features	Benefits for the customer
Environmental Product Declaration (EPD)	Helping buildings to comply with leading sustainability certifications such as LEED and BREEAM
Sublimation technology	Creates appearance of wood without depleting natural resources
High durability and anti-corrosion properties	Little maintenance required
Excellent edge coverage	Design consistency
Superb color and texture range	Ensuring the perfect solution for every need
Upto 25-year warranty	Long-term performance guaranteed

## Technical specifications

When applied by an Interpon D Approved Applicator, Interpon D powders (base coats) also come with a performance guarantee\*.

\* Performance guarantee is applicable when using Interpon D STF Approved Films only. To know more about the Interpon D STF Approved Films, contact the AkzoNobel representative.

Sublimation technology is mostly used to transform architectural aluminum components to give them the appearance of wood. Items such as windows, doors, screens, shutters, louvers and even outdoor furniture can be transformed using the sublimation process. The powder coated aluminum alternative offers all the natural beauty and warm aesthetic appearance of wood without the labor-intensive and costly aftercare requirements associated with choosing a natural product.
